ANAND SEETHARAMAN

Manufacturing Engineer

Flight Hardware | High-Rate Aerospace Production | Non-Conformance Root Cause & Corrective Action | SolidWorks CSWP | CATIA
(404) 644-8608 | aseethar94@gmail.com | Spanaway, WA | U.S. Person (ITAR Eligible) | anandseetharamanmet.github.io

PROFESSIONAL SUMMARY

Mechanical Engineering Technology graduate (B.S., Kennesaw State University) building and integrating satellite flight hardware at SpaceX on a high-rate Starlink line producing ~7 satellites per shift. Troubleshoots non-conforming hardware, supports root-cause analysis and corrective action, and feeds build-floor observations and work-order/work-instruction feedback to engineering that support permanent corrective actions on recurring hardware and process issues. Supported the V3 production line ramp-up while maintaining configuration and quality conformance. Interprets technical drawings and installation documentation; CAD in SolidWorks (CSWP) and CATIA / 3DEXPERIENCE; automotive mechanical diagnostics background.

ENGINEERING & TECHNICAL SKILLS

Manufacturing & Production: Flight Hardware Assembly, Integration & Test | High-Rate Production & Line Ramp-Up | Calibrated Precision Tools & Torque Verification | Crimping, Termination & Cable Routing

Quality & Problem Solving: Non-Conformance Troubleshooting & Rework | Root Cause Analysis | Corrective Action Support | Structured Fault Isolation | Configuration & Process Conformance | Work-Order / Work-Instruction Feedback

Design & Documentation: Technical Drawing Interpretation | 3D CAD: SolidWorks (CSWP), CATIA / 3DEXPERIENCE | Mechanism Design & Prototyping (3D Printing) | FEA (SolidWorks Simulation) | Material Selection | Multimeter & Megohmmeter Testing | Cross-Functional Collaboration (Build & Engineering Teams)

PROFESSIONAL EXPERIENCE

SpaceX

Integration Technician – Starlink | Redmond, WA | Aug 2025 – Present

- Partner with engineering on recurring hardware and process issues, providing build-floor observations and work-order/work-instruction feedback that support root-cause investigations and permanent corrective actions.
- Troubleshoot non-conforming flight hardware with structured fault isolation and execute approved corrective actions and rework to restore flight-ready status.
- Support V3 production line ramp-up on a high-rate line producing ~7 satellites per shift, resolving integration issues in real time, communicating technical blockers across build and engineering teams, and maintaining product conformance.
- Assemble, test, verify, and install satellite flight hardware with calibrated precision tools to strict process, quality, and configuration requirements.

Temporary Assignment – Data Center Project Support | Memphis, TN | Sep 2026 – Present

- Build up and install MCB assemblies and low-voltage electrical infrastructure for a large-scale data-center project, interpreting technical drawings and installation documentation to maintain configuration, quality, and safety requirements.
- Route, land, crimp, terminate, label, and torque-verify low-voltage cabling in data halls and enclosures; verify connections and installation quality with multimeter and insulation-resistance (megohmmeter) testing.
- Troubleshoot and correct termination and connectivity issues during installation and verification.

The Home Depot — Resolution Expediter | WA / GA | Oct 2022 – Aug 2025

- Conducted systematic root-cause analysis on complex operational issues and developed solutions that reduced recurrence and improved process consistency.
- Coordinated cross-team problem solving to resolve time-sensitive issues while maintaining quality and operational requirements.

Ford Performance Specialists — Automotive Technician | GA | Jun 2017 – Apr 2020

- Diagnosed complex mechanical faults using advanced diagnostic tools; performed assembly, disassembly, repair, and post-repair verification to technical specifications.
- Applied disciplined fault isolation and troubleshooting methods across automotive mechanical systems to improve repair reliability.

EDUCATION & CREDENTIALS

Bachelor of Science, Mechanical Engineering Technology | Kennesaw State University, Kennesaw, GA | Dec 2023

- **Senior Design Project – Barrel Trap (Forklift Barrel-Gripping Attachment):** Designed the full forklift-mounted barrel-gripping mechanism in SolidWorks and ran all FEA in SolidWorks Simulation (stress, displacement, strain, factor of safety) on a five-person team; supported material selection and a working 1/10-scale, fully 3D-printed prototype.
- **Certified SolidWorks Professional (CSWP)**
- **Mechanical Design Certificate – Dassault Systèmes** (CATIA / 3DEXPERIENCE foundation)
